

PROFESSIONAL CERTIFICATE IN BIM-BASED ARCHITECTURAL DESIGN

PHASE 1 | Orientation + Foundations (*Short Intro Phase*) - 02 Weeks

Learning Outcome: Build conceptual clarity before technical work

Contents

- What is architecture vs drafting
- Design process overview
- Reading drawings basics
- Introduction to BIM concept
- Revit interface overview

PHASE 2 | Architectural Drawings + Revit Execution (Core Phase) – 06 Weeks

Complete professional Theory + Design Logic + Software Execution

Contents

2.1 Floor Plans

Theory

- Spatial planning
- Zoning
- Circulation
- Wall thickness logic
- Standard room sizes

Revit Workflow

- Levels
- Walls
- Doors & windows
- Dimensions
- Room tags

Output: Complete professional plan

2.2 Elevations

Theory

- Proportion
- Visual balance
- Materials expression
- Architectural style basics

Revit Workflow

- Elevation views
- Wall finishes
- Roof forms
- Detail levels

Output: Presentation elevation

2.3 Sections

Theory

- Vertical relationships
- Structural logic
- Heights
- Stair principles

Revit Workflow

- Section creation
- Level references
- Component visibility

Output: Technical section drawing

2.4 Roof Plans

Theory

- Roof types
- Drainage logic
- Slope principles
- Roof by footprint
- Roof slopes

- Fascia + gutters

PHASE 3 | BIM Intelligence + Documentation (Core2 Phase) – *04 Weeks*

Learning Outcome: Move from modeling to professional documentation

Contents

- Annotation standards
- Sheets & layouts
- Schedules
- Legends
- Material takeoff basics
- View templates

PHASE 4 — Design Studio Project (Application Phase) – *04 Weeks*

Learning Outcome: Guided Project to Independent Project.

Contents

Stage 1 — Guided

Students model instructor's project step-by-step

Stage 2 — Independent

Students design and model their own house

Deliverables: Prepare Full set Construction Document

- Plan
- Elevation
- Section
- 3D view
- Sheet layout Etc..
